**MODERN PEDAGOGICAL TECHNOLOGIES IN THE TRAINING
FOREIGN LANGUAGES**

Annotation: The purpose of this article is highlight of the role of using pedagogical modern technologies in the training foreign languages.

Keywords: modern technologies, teaching, training, foreign language.

In recent years, the question of the use of new information technologies in high school has been increasingly raised. This is not only new technical means, but also new forms and methods of teaching, a new approach to the learning process. The main goal of teaching foreign languages is the formation and development of a communicative culture of schoolchildren, teaching practical mastery of a foreign language.

Today, the main electronic means of teaching the language is the Internet. His attractiveness, in our opinion, is related to the fact that he creates an environment conducive to the development of creative and cognitive abilities of youths and youths in conditions of unregulated and many Variability of teaching, formation and development of divergent (non-stereotyped) thinking, which is characterized by the ability to put forward many right ideas at the same time, speed, flexibility, originality, accuracy. Internet in the process of teaching foreign languages can be used in the following cases:

- information search in preparation for the training of both youths and the teacher (the Internet speeds up the process, saves time and allows you to cover more sources); An example in this case can be the use of electronic libraries with the ability to quickly access a large amount of reference material and as a source of didactic and educational-methodological base for its further processing or processing by the teacher;

- Synchronous (on-line) or asynchronously (off-line) communication, including native speakers, through communication on the discussion forums and chat rooms, which creates an environment for the formation and development of basic language skills and communicative competence;

- distance learning, which becomes a common form of acquisition of knowledge, giving the opportunity to become certified international experts;

- testing In real time, available on the websites of language schools and training Web portals, as well as on the servers of educational institutions;

Along with using the Internet, the use of special computer programs becomes an integral unit of the learning process. To this group of technologies you can include such specialized programs as:

- computer courses (Reward, The Business);
- electronic dictionaries and translators;
- Professional software, examples of which include programs such as Power Point, which is used for the preparation of presentations, slide shows and PR-actions, the creation of a portfolio; Adobe Audition, which allows you to improve your phonetic skills and create your own audio texts.

The new educational standards of many universities have already included the mandatory provision of the teaching of foreign languages with innovative technical means, which include interactive whiteboards, projectors, DVDs, video cameras and dictaphones; Allowing to make a variety in the learning process and make it possible to analyze the learning situations by the teacher and by the youths themselves.

Nowadays the computer is an effective assistant and integral part of everyone, which allows to improve the quality of training and the effectiveness of control. Currently, the use of computers in the educational process is very important. I want to focus on the use of computer presentations in the educational process. The use of presentations allows to every teacher to intensify

mastering of educational material by youths and conduct classes at a qualitatively new level, instead of using a regular blackboard projecting slide films from the computer screen to a large wall-mounted screen or a personal computer (laptop) for each youth. Colorfully designed presentations (using animation effects, in the form of text, a diagram, a graphic, a drawing.) solve the problem of using visual material. For example, if you previously cut and paste pictures on the board, then now you can find pictures with the help of Internet and insert them on the slide right away. If there is a lot of pictures, then make a few slides.

The current situation dictates not only the use of new technologies in the process of teaching foreign languages, but also requires a change in the methodology of teaching and the ability to introduce the latest innovative technologies in the process of learning foreign languages from the teacher. Using the Internet and other technologies gives great possibilities teacher.

The use of modern technologies, in particular computers, Internet resources, special educational multimedia programs, as well as modern technical means (DVD, video cameras, dictaphones), allows to optimize the educational process in the following areas:

- increase of motivation of youths and teachers due to active involvement in the process of live communication;

- Education of the youth's independent personality through the skills to find, evaluate and analyze information;

- Intensification of the educational process, which allows rationally organize the educational process, both within the classroom and in the independent work of youths;

- Development of professional and communicative skills of youths and teachers.

The possibilities of using Internet resources are enormous. The global Internet network creates the conditions for obtaining information that is necessary for youths and teachers anywhere in the world: news, regional material, foreign Reference etc. In the English language classes, the Internet helps me solve a number of didactic tasks:

- to develop reading skills and skills using the materials of the global network;

- Improve the skills of written speech of schoolchildren;

- Replenish the vocabulary of youths;

- Form a stable motivation for youths to learn English. In addition, the work is aimed at studying the possibilities of Internet technologies to expand the outlook of schoolchildren, to establish and maintain business contacts and contacts with their peers in English-speaking countries.

Youth take great pleasure in the lessons, repeat words, sing songs, perform exercises. The ability to listen to the recording several times, repeatedly perform assignments, and practice at home give the children confidence that everything will work out for them. The use of information and communication technologies help make the lessons more vivid, interesting, and memorable.
